WHAT IS THIS PRODUCT?

Fund type: FDI BRD Global is an undertaking for collective investment in transferable securities (UCITS) and promotes environmental and social characteristics in accordance with Article 8 paragraph (1), (2) and (2a) of Regulation (EU) 2019/2088.

The period: This product does not have a predetermined duration, but the recommended minimum duration is five years. However, fund units may be redeemed on demand at any time, and are continuously redeemable.

Objectives: Active resource valorisation through investment in global equity markets, in particular by investing in marketable ETF-type UCITS with exposure in relation to them. Product performance is closely related to developments in global stock indices. For a holding period shorter than the recommended period, the product may have higher volatility.

Instruments: The Fund will actively use investment in securities, and units issued by other marketable ETF-type UCITS, units issued by unlisted investment funds, with the aim of reducing the risk taken by the Fund by spreading the risk across various financial instruments, industries and geographical areas. These instruments should not affect an investor's ability to redeem units on demand. The Fund does not expressly track any index.

Strategic (long-term) Fund allocation in terms of asset classes is: 90% investments in shares, units issued by marketable ETF-type UCITS with global equity market exposure and units issued by equity investing UCITS and 10% to other assets such as deposits and bonds. The Fund may also invest in other categories of instruments, such as derivatives. The Fund promotes environmental and social characteristics and expects the issuers in which it invests directly or indirectly to follow good governance practices, but does not have a sustainable investment objective, nor does it aim to have a minimum proportion of sustainable investments. The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities. Full details on the promoted environmental and social characteristics are available in Annex 1 to the Fund Prospectus.

The Fund does not distribute any dividends, and gains obtained from investment made are reinvested in the Fund and included in the fund unit value which is published each working day.

Markets: When allocating investment, the Fund will take into account the size and importance of the various financial markets, and so the main exposures will be to mature markets such as those in the US, Europe or Japan, as well as Switzerland, but it can also invest in assets with exposure on other markets.

Investor type: Taking into account Fund objectives and the Investment Policy, it is addressed to investors interested in investing in international capital markets. As a result, the profile of the investor to whom the Fund is addressed is one who has defined a long-term investment horizon and who takes on the risks set out in the Prospectus.

Other information: The Fund Depositary is BRD - Groupe Societe Generale. Fund documents and reports, as well as the latest fund unit values may be found at: www.brdam.ro.

The risk indicator assumes you keep the product for the minimum recommended period of 5 years. The actual risk can be significantly higher if you keep the product for a shorter period than the minimum recommended and you may receive a smaller amount than the one invested. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 3 (medium-low) out of 7 for class RON and class EUR and 4 (medium) out of 7 for class USD. This rates the potential losses from future performance at a medium-low for class RON and class EUR and at a medium level for class USD, and poor market conditions are unlikely to impact, respectively, could impact the Fund's capacity to pay you.

The Fund is denominated in RON but also has classes in other currencies and their return may vary depending on the fluctuations of these currencies against the national currency.

The risks relevant for the Fund are not included in the synthetic risk indicator (SRI):

The liquidity risk - is related to the ability to meet payment obligations when they are due without incurring unacceptable costs. The Fund's investment will be made on different markets whose liquidity may vary. The conditions of reduced or null liquidity at a given time on one or more of these markets may have a negative impact on the fund unit value, especially in case of significant changes in its asset.

The operational risk - is the risk of a loss determined either by the use of inadequate processes, systems or human resources or that did not fulfil their function properly, or by external events and actions.

The likely estimated impact of the Fund's sustainability risks is low.

This product does not include any protection against future market performance and therefore you may lose all or part of your investment. The tax legislation of the individual investor's home Member State may have an impact on the actual remuneration.

Markets could perform very differently in the future. The crisis scenario shows what you can achieve in extreme market circumstances.

WHAT HAPPENS IF BRD ASSET MANAGEMENT S.A.I IS UNABLE TO PAY OUT?

This product is not covered by any guarantee scheme. There is a potential risk of not obtaining the expected return and even of losing the initial investment. This risk arises from the financial instruments held in the Fund's portfolio, as a result of adverse changes in the creditworthiness of the counterparty or the issuer of a financial instrument, as they may end up not fulfilling their obligations on time or in their entirety.

According to the specific legislation, the assets of the funds are separated from the assets of the Manager, BRD Asset Management S.A.I., and are not affected in the event of the Manager's potential inability to pay.

WHAT ARE THE COSTS?

The person selling you this product may charge you other costs. In this case, it will provide you with information on those costs and show you the impact of all costs on your investment over time.

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you own the product and the product performance. The amounts shown here are illustrations based on an example of an invested amount and on different possible investment periods.

Costs over time

We have assumed:

— In the first year you would get back the amount that you invested (0% annual return). For the other holding periods, we have assumed the product performs as shown in the moderate scenario

— The amount of EUR 10 000/ USD 10 000/ RON 50 000 per year is invested

	If you redeem after 1 year			If you redeem after 5 years (recommended holding period)
